## Education & Honors

---

<b>King Abdullah University of Science and Technology</b> – GPA: 3.92/4.0	2023 - Present
Masters of Science in Computer Science	
<b>Virginia Tech</b> – GPA: 3.89/4.0	2019 - 2023
Bachelor of Science in Computer Science with minors in Cybersecurity and Mathematics	
KAUST Gifted Student Program, recipient of full-tuition merit scholarship	2019-2023
Virginia Tech, Dean's List	2019-2023

## Experience

---

<b>Research Intern</b> , King Abdullah University of Science and Technology	June – August 2022
<ul style="list-style-type: none"><li>• Wrote installation scripts for ExaGeoStat and all its dependencies for the Spack Package Manager.</li><li>• Added options to allow these Spack packages to enable CUDA and MPI to utilize graphics cards and distributed systems for ExaGeoStat.</li><li>• Collaborated with the Barcelona SuperComputing Center to containerize ExaGeoStat.</li></ul>	
<b>Research Intern</b> , University of Washington	June – August 2021
<ul style="list-style-type: none"><li>• Developed a classification algorithm for muscle fibers, using K-means Clustering in MATLAB.</li><li>• Cleaned and eroded the images to make the divisions among fibers more noticeable.</li><li>• Successfully classified 89% of the muscle fibers on average.</li></ul>	

## Projects

---

<b>Twitter Emotion Sentiment Analysis</b>	November - December 2023
<ul style="list-style-type: none"><li>• Used BERT to classify the emotions conveyed within a dataset of tweets.</li><li>• Classified emotions such as happiness, sadness, fear, and disgust with a testing accuracy of 91%.</li></ul>	
<b>Language Classifier</b>	October 2023
<ul style="list-style-type: none"><li>• Used Recurrent Neural Networks to classify what language a sequence of text belongs to.</li><li>• Achieved a 71% accuracy across 18 languages.</li></ul>	
<b>MNIST Autoencoder</b>	September 2023
<ul style="list-style-type: none"><li>• Used Convolutional Neural Networks in Pytorch to create an MNIST Autoencoder.</li><li>• Reduced the dimensionality of the data by 96%.</li><li>• Created faithful reconstructions of MNIST images from encodings of size 30.</li></ul>	
<b>Backdoor Image Sanitation on Facial Classifiers</b>	January - May 2023
<ul style="list-style-type: none"><li>• Implemented Strong Intentional Perturbation (STRIP) to Detect backdoor images.</li><li>• Created a poisoned facial classifier to generate backdoor images.</li><li>• Wrote a program that sanitized backdoor images with 93% accuracy.</li></ul>	

## Skills

---

**Libraries:** Pytorch, Pandas, Scikit-Learn, TensorFlow, Matplotlib, SciPy, NumPy

**Languages:** Python, C, C++, Java, Javascript, Go, Kotlin, SQL, Scheme, MATLAB

**Platforms:** Docker, Github, MongoDB, Linux/Unix, AWS
